

3.3V Low Power Half-Duplex RS-485 Transceiver with 10Mbps Data Rate

August 5, 2021

Description

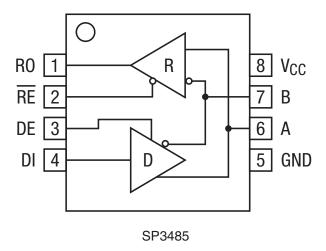

The <u>SP3485</u> device is a 3.3V low power half-duplex transceiver that meets the specifications of the RS-485 and RS-422 serial protocols. This device is pin-to-pin compatible with the MaxLinear SP481, SP483 and SP485 devices as well as popular industry standards. The SP3485 can meet the electrical specifications of the RS-485 and RS-422 serial protocols up to 10Mbps under load.

FEATURES

- RS-485 and RS-422 transceiver
- Operates from a single 3.3V supply
- Interoperable with 5.0V logic
- Driver/receiver enable
- -7V to +12V common-mode input voltage range
- Allows up to 32 transceivers on the serial bus
- Compatibility with industry standard 75176 pinout
- Driver output short-circuit protection

Absolute Maximum Ratings

These are stress ratings only and functional operation of the device at these ratings or any other above those indicated in the operation sections of the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability.

V _{CC}		6.0V
Input Voltages		
	Logic	0.3V to 6.0V
	Drivers	0.3V to 6.0V
	Receivers	±15V
Outputs		
	Drivers	±15V
	Receivers	0.3V to 6.0V
Receiver Outpu	ut Current	±60mA

Storage Temperature65°C to	to 150°C
Maximum Junction Temperature, T _J	125°C
Power Dissipation	600mW
(derate 6.90mW/°C above 70°C)	

Operating Conditions

ESD Rating

Human Body Model (HBM).....±2kV

CAUTION:

ESD (ElectroStatic Discharge) sensitive device. Permanent damage may occur on anconnected devices subject to high energy electrostatic fields. Unused devices must be stored in conductive foam or shunts.

Personnel should be properly grounded prior to handling his device. The protective foam should be discharged to the destination socket before devices are removed.

Electrical Characteristics

Unless otherwise noted: $T_{AMB} = T_{MIN}$ to T_{MAX} and $V_{CC} = 3.3V \pm 5\%$.

3

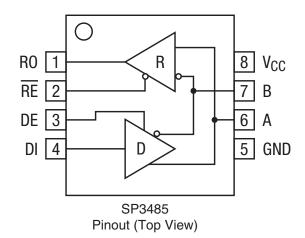

^{1.} The transceivers are put into shutdown by gringing RE high and DE low simultaneously for at least 600ns. If the control inputs are in this state for less than 50ns, the device is guaranteed to not enter shutdown. If the enable inputs are held in this state for at least 600ns, the device is assured to be in shutdown. Note that the receiver and driver times increase significantly when coming out of shutdown.

2. This spec is guaranteed by design and bench characterization.

Description

The SP3485 is a member in the family of 3.3V low power half-duplex transceivers that meet the electrical specifications of the RS-485 and RS-422 serial protocols. This device is pinto-pin compatible with the MaxLinear SP481, SP483 and SP485 devices as well as popular industry standards. The SP3485 feature MaxLinear's BiCMOS process allowing low power operation without sacrificing performance.

Driver

The driver outputs of the SP3485 are differential outputs meeting the RS-485 and RS-422 standards. The typical voltage output swing with no load will be 0 volts to 3.3 Volts. With a load of 54Ω across the differential outputs, the drivers can maintain greater than 1.5V voltage levels.

The driver of the SP3485 has a driver enable control line which is active HIGH. A logic HIGH on DE (pin 3) will enable the differential driver outputs. A logic LOW on the DE (pin 3) will tri-state the driver outputs.

The driver of the SP3485 operates up to 10Mbps. The 250mA I_{SC} maximum limit on the driver output allows the SP3485 to withstand an infinite short circuit over the $\,$ -7.0V to 12V common mode range without catastrophic damage to the IC.

Receiver

The SP3485 receiver has differential inputs with an input sensitivity of $\pm 200 mV$. Input impedance of the receiver is $12 k\Omega$ minimum. A wide common mode range of -7V to 12V allows for large ground potential differences between systems. The receiver is equipped with a fail-safe feature that guarantees the receiver output will be in a HIGH state when the input is left unconnected. The receiver of the SP3485 operates up to 10Mbps.

The receiver of the SP3485 has an enable control line which is active LOW. A logic LOW on RE (pin 2) will enable the differential receiver. A logic HIGH on RE (pin 2) of the SP3485 will disable the receiver.

Low Power Shutdown Mode

Low-power shutdown mode is initiated by bringing both $\overline{\text{RE}}$ high and DE low. In shutdown, the devices typically draw only 50nA of supply current. $\overline{\text{RE}}$ and DE can be driven simultaneously; the part is guaranteed not to enter shutdown if $\overline{\text{RE}}$ is high and DE is low for less than 50ns. If the inputs are in this state for at least 600ns, the parts are guaranteed to enter shutdown.

Enable times t_{PRZH}, t_{PZH}, t_{PRZL} and t_{PZL} assume the part was not in a low-power shutdown state. Enable times t_{PRSH}, t_{PSH}, t_{PRSL} and t_{PSL} assume the parts were shut down. It takes drivers and receivers longer to become enabled from low-power shutdown mode (t_{PRSH}, t_{PSH}, t_{PSL}, t_{PSL}) than from driver/receiver-disable mode (t_{PRZH}, t_{PZH}, t_{PZL}, t_{PZL}).

Revision History

Revision	Date	Description
10/15/02		Legacy Sipex Datasheet
06/19/12	1.0.0	Convert to Exar Format. Update ordering information and add new Figure 8 - Driver Short Circuit Current Limit Test Circuit. Remove EOL device SP3481.
06/27/16	2.0.0	Update logo. Update description paragraph on page 1. Update timing specifications in electrical characteristics table on pages 2 and 3. Add Driver and Receiver Enable from Shutdown timing information on pages 3 and 4. Update typical supply current information on page 4. Update Figures 2, 4, 6, and 8. Update Figures 11 and 13 to add shutdown timing labels. Add low power shutdown section to page 7. Update transmit and receive truth tables on page 7. Update Receiver section on page 7.
09/06/17	2.0.1	Remove GND from Differential Output Voltage min (page 2). Added maximum junction temperature, package power dissipation and ESD rating. Update to MaxLinear logo, update format and ordering information table.
08/05/21	2.0.2	Added: In the "Absolute Maximum Ratings" section, "Receiver Output Current" parameter. Updated: In the "Absolute Maximum Ratings" section, replaced "Output Voltages" with "Outputs". Removed: In the "Electrical Characteristics" section, "Short circuit current" parameter.
